

Replication pack for “A Theory of the Term Structure of Interest Rates under Limited Household Risk Sharing”

January 17, 2024

Abstract

This document describes the files that reproduce the results in “A Theory of the Term Structure of Interest Rates under Limited Household Risk Sharing”. Section 1 describes our model’s results. Section 2 describes our empirical results.

1 Model results

1. First, run the following files in order to generate model outputs:
 - (a) `model results\run1a_baseline_sr.m`: this file computes the baseline model
 - (b) `model results\run1b_baseline_no_sr.m`: this file computes the model without slow recoveries
 - (c) `model results\run5a_crta_sr.m`: this file computes the crta version of the model
 - (d) `model results\run6a_time_varying_s_sr.m`: this file computes a version of the model with time-varying separation rates
 - (e) `model results\run7a_Nstate_sr_fit_v3.m`: this file computes a version of the model in which productivity follows an AR(1) process
2. After the first step, generate plots using the following files:
 - (a) `model results\gen_tableX.m` generates (the model-implied results in) table X from the paper
 - (b) `model results\gen_figureX.m` generates figure X from the paper

2 Empirical results

Due to copyright reasons, we cannot provide the input data. Data sources are indicated below. Except for the Fama-Bliss discount bond dataset from CRSP, all data are publicly available. Note that FRED sometimes updates their series; where applicable, this may lead to small differences between the replication results and those reported in the paper.

1. Figure 1: Slope of the yield curve
 - Go to the folder: `empirical results\Figure1_replication`
 - Run `gen_Figure1_main.do` and then run `gen_Figure1.m`
 - This program requires the following data:
 - Gurkaynak, Sack, and Wright (GSW) nominal yield curve data set, available here: <https://www.federalreserve.gov/>
 - GSW TIPS data set, available here: <https://www.federalreserve.gov/data/tips-yield-curve-and-inflation-compensation.htm>
 - University of Michigan survey for inflation expectations, available here: <https://fred.stlouisfed.org/series/MICH>
 - Chicago Fed National Activities Index, available here: <https://fred.stlouisfed.org/series/CFNAI>
 - Treasury transaction volume, available here: <https://www.newyorkfed.org/markets/counterparties/primary-dealers-statistics>

2. Figure 5: Third central moment of income growth and unemployment rate changes
 - Go to the folder: empirical results\Figure5_replication
 - Run prep_plot_data.do to prepare data and then run plot_mu3_vs_skew.m to plot the data
 - This figure uses the unemployment rate series from FRED (<https://fred.stlouisfed.org/series/UNRATE>) as well as the skewness series from Guvenen, Ozkan, and Song (JPE, 2014). The latter can be downloaded from Fatih Guvenen's website (<https://www.fatihguvenen.com/s/gos-jpe2014-data.xlsx>)
3. Table 1: Parameter values (data values) and Table 2: Moments of real variables and asset prices (data portion)
 - Go to the folder empirical results\Table1_Table2_replication.
 - Run compute_flows.m to generate flow rates in and out of unemployment. This program requires the following series from FRED: Civilian Labor Force (CLF16OV), Unemployment Level (UNEMPLOY), and Number of Civilians Unemployed for Less Than 5 Weeks (UEMPLT5)
 - Run macro_moments_1964_2016.do and asset_price_moments_1964_2016.do
4. Table 3: Term structure of bond yields and log excess holding period returns (data portion)
 - Go to the folder: empirical results\Table3_replication and run gen_Table3.do. The program uses the Fama-Bliss discount bond dataset from CRSP
5. Table 5: Labor markets predict bond excess returns (data portion), Table A2: Labor market search and bond risk premia, and Table A1: Summary statistics
 - Go to the folder empirical results\Table5_TableA2_replication
 - Run compute_flows.m to generate flow rates in and out of unemployment. This program requires the following series from FRED: Civilian Labor Force (CLF16OV), Unemployment Level (UNEMPLOY), and Number of Civilians Unemployed for Less Than 5 Weeks (UEMPLT5)
 - To generate the empirical results in Table 5, run gen_Table5.do. This files uses the following data sources: the Fama-Bliss discount bond dataset from CRSP, the Barnichon Help Wanted Index (downloadable from Regis Barnichon's website <https://sites.google.com/site/regisbarnichon/>), and the previously generated labor market flows
 - To generate Tables A1 and A2: run gen_TableA1_TableA2.do. This uses the following data sources: Fama-Bliss discount bond dataset from CRSP, the following series from FRED: PAYEMS, CPIAUCSL, UNRATE, and FEDFUNDS, the Barnichon Help Wanted Index, the previously constructed labor market flows, and MWD/GDP from Greenwood and Vayanos (RFS, 2014, Online Appendix)
6. Table 6: Fama-Bliss regressions (data portion)
 - Go to the folder: empirical results\Table6_replication. Run run_replicate_FamaBliss.do
 - This program uses the Fama-Bliss discount bond yields dataset from CRSP
7. Table 7: Sign of mean reversion in $\mu_{3,t,t+T}^{inc}$
 - Go to the folder empirical results\Table7_replication and run est_mean_reversion.do. Data requirements: download <https://www.fatihguvenen.com/s/gos-jpe2014-data.xlsx> from Fatih Guvenen's website, and UNRATE from FRED
8. Table 8: Covariance of $\log \zeta_{t,t+T}$ over the business cycle
 - Go to the folder empirical results\Table8_replication and run gen_Table8.do
